# Airmass/Moisture Boundary over N. Africa

MSG-1, 23 February 2006, 12:00 UTC

# Airmass/Moisture Boundary over South Africa

The image is a meteorological map of South Africa and the surrounding Indian Ocean. A yellow line represents the airmass/moisture boundary. The area to the west of this line is labeled 'dry' and the area to the east is labeled 'moist'. The map uses a color scale where blue and cyan represent cooler temperatures and red and orange represent warmer temperatures. The boundary line starts in the upper left, curves south, then east, and finally south again towards the bottom right. The coastline of South Africa is visible on the right side of the map.

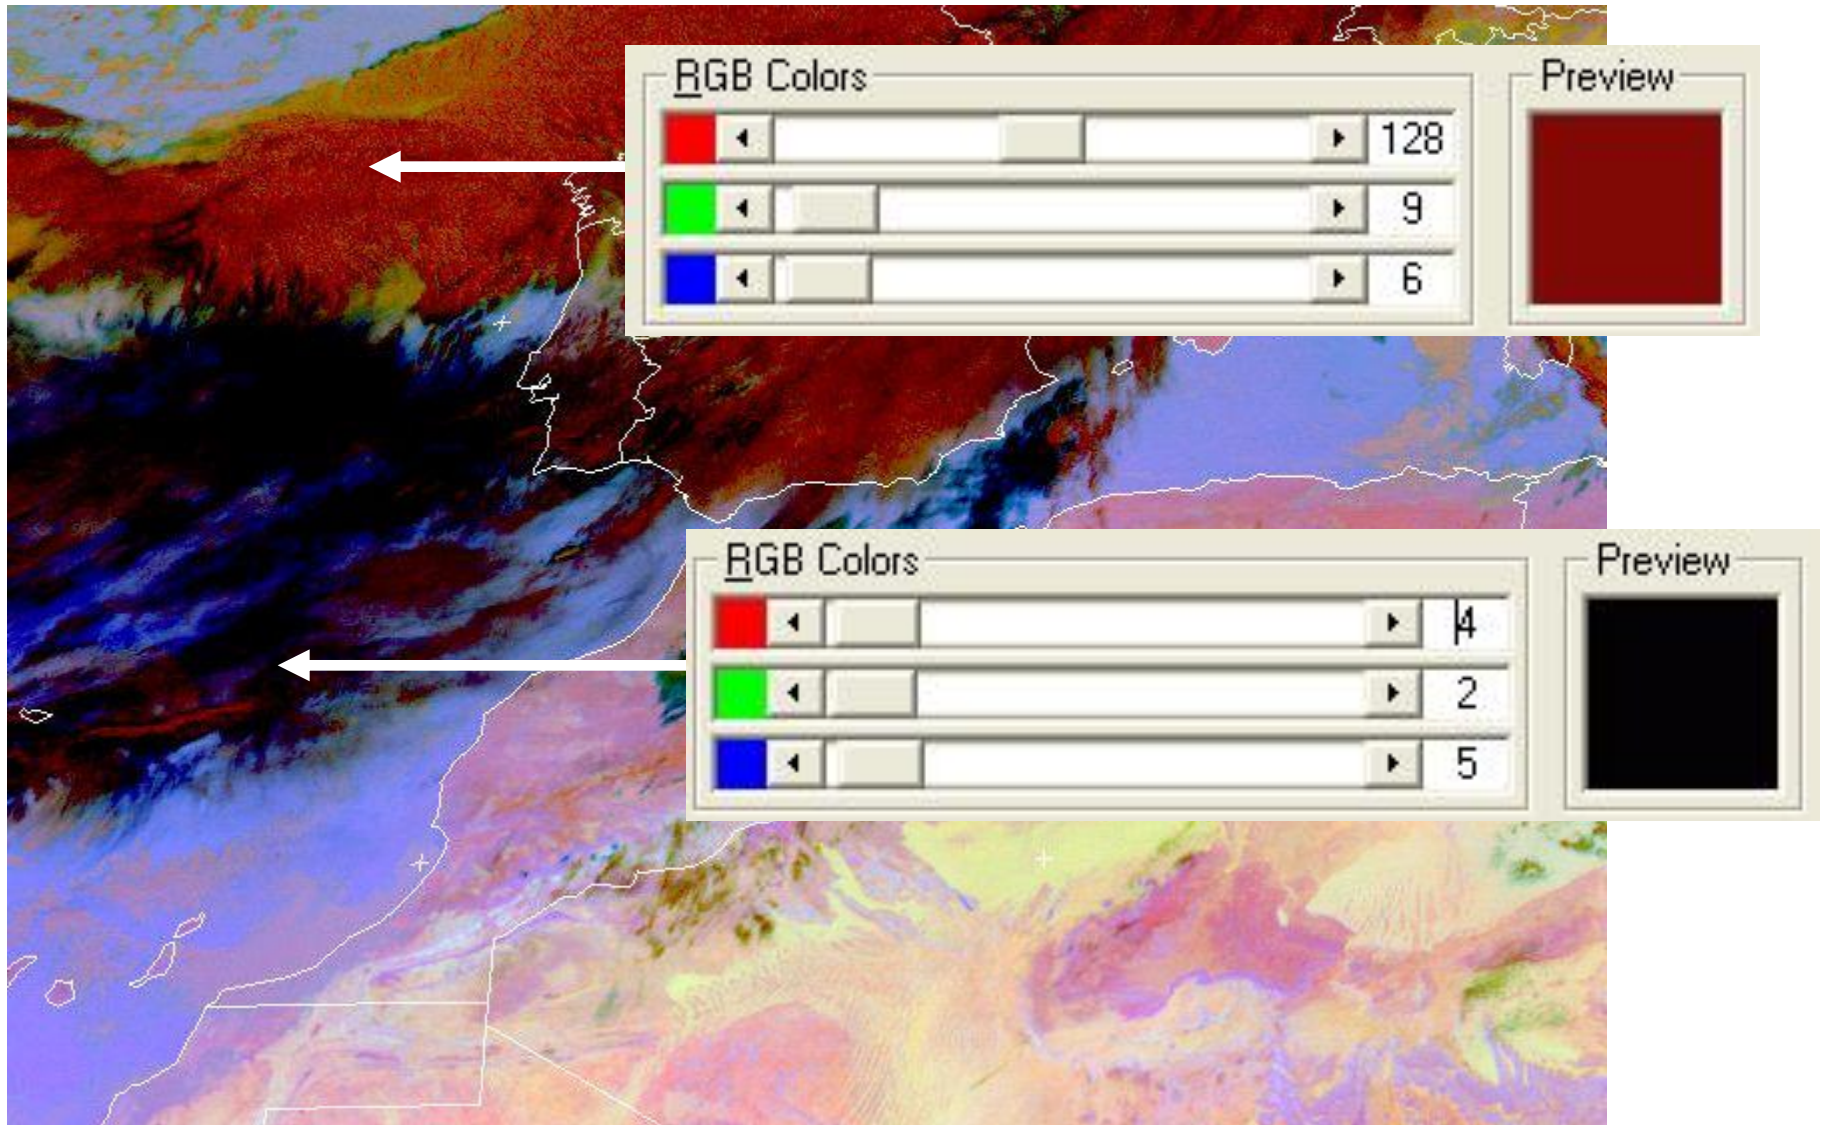

**dry**
